

Yahya Rahimi

Software Engineer

San Diego, CA | (510) 205 0923 | gyr.rahimi@gmail.com | <https://yahyarahimi.dev>

Versatile Software Engineer with 5+ years of core engineering experience building scalable cloud-based systems and high-performance microservices using Java and Scala (Akka HTTP/Play Framework). Proven track record of reducing request latency by 30% and cutting deployment times by 50% via robust CI/CD pipelines. Demonstrated ability to own full-stack development, from designing multi-tenant SaaS features to leveraging AI-assisted workflows and coding agents (Cursor) for rapid and production-grade delivery. Brings a unique full-lifecycle perspective shaped by foundational roots in enterprise application support and technical systems administration.

Skills

Languages & Frameworks: Java, Scala, JavaScript, TypeScript, Python, React, Next.js, Node.js, Salesforce LWC, Play Framework, Akka HTTP, Spring Framework

Backend & Cloud: RESTful APIs, Microservices, System Design, AWS (EC2, S3, RDS, IAM, Lambda), Docker

DevOps & Automation: Terraform, Jenkins, GitHub Actions, CI/CD, Infrastructure as Code

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB

Observability & Quality: CloudWatch, Instana, New Relic, Google Analytics 4, Log4j, Unit and Integration Testing, ScalaTest, Jest, Selenium

Professional Strength: Full-Lifecycle Ownership, AI-Accelerated Engineering, Cross-Functional Collaboration, Production Observability, Data Integrity & Migration, Problem-Solving and Critical Thinking

Work Experience

Tech Admin

Aug 2024 – Present

International Ally Federation

- Led end-to-end development of the IAF website and Health Compass, a production wellness assessment platform used to support community health programs – spanning UI, backend APIs, data persistence, and deployment.
- Built Health Compass full-stack features in TypeScript, Astro, and Tailwind CSS: multi-section assessment flow, scoring engine, D3 results visualization, PDF export, and email based results sharing via Netlify serverless functions and transactional email (Resend).
- Extended Health Compass toward a multi-tenant SaaS architecture using Supabase/PostgreSQL, row-level security, assessment autosave APIs, and Netlify Edge Functions.

- Used AI-assisted development workflows (Cursor and coding agents) to design, implement, debug, and iterate on Health Compass and site features – pairing agentic tooling with structured technical docs and human review for production-quality delivery.
- Owned platform operations and engineering hygiene: GitHub Actions CI/CD, GA4 analytics with cookie consent, bilingual English/Farsi UX, cybersecurity practices, Microsoft 365 administration, and technical documentation for scaling programs.

Software Engineer

Nov 2019 – Aug 2024

ServiceRocket Inc.

- Designed and implemented scalable backend architectures and microservices using Scala (Akka HTTP/Play Framework) and Java, modernizing legacy workflows for B2B client applications serving thousands of active users.
- Engineered secure, high-performance RESTful APIs and data-processing layers, reducing request latency by 30% for enterprise customer data-sync operations.
- Diagnosed production bottlenecks and security incidents using Instana and New Relic, systematically reducing system errors and ensuring 99.9% service availability.
- Built and automated infrastructure as code (IaC) pipelines using Terraform, Jenkins, and GitHub Actions, cutting application deployment times by 50%.
- Provisioned and optimized AWS infrastructure (EC2, S3, RDS, IAM), cutting operational cloud overhead while strengthening access security.
- Created automated Python and Node.js scripting utilities that eliminated manual testing bottlenecks, saving the team 20 engineering hours per month.
- Participated actively in Agile ceremonies, conducted comprehensive code reviews, and mentored junior peers on unit testing strategies using ScalaTest and Jest.

Application Support Engineer

Oct 2017 – Nov 2019

ServiceRocket Inc.

- Provided tier-3 technical support for enterprise clients configuring complex Jira workflows, webhooks, and REST API integrations, maintaining a customer satisfaction rating above 90%.
- Planned and executed massive data migrations from Jira Server to Jira Cloud, verifying 100% data integrity across thousands of production records with zero business downtime.
- Collaborated as a technical liaison between global enterprise clients and core engineering teams to isolate, document, and prioritize software bugs.
- Built integrations connecting Jira to development workflows like GitHub and Azure DevOps, boosting client engineering efficiency.

Education

Bachelor of Computer Science with Honours (GPA 3.75)

Sep 2013 – Aug 2017

Universiti Sains Islam Malaysia
